## o61 — Electrical connections

## Setting:

- 1 Open parameter r12 and stop the regulation**
- 2 Open parameter o06 and set the used sensor type**
- 3 Select electric connection based on the drawings on page 2**
- 4 Open parameter o61 and set the electric connection number in it**
- 5 Now select one of the preset settings from the table on the right-hand side**
- 6 Open parameter o62 and set the number for the array of pre-settings**
- 7 Open parameter r12 and start the regulation**
- 8 Go through the survey of factory settings.  
Make any necessary changes in the respective parameters.**

### 9 For network.

- a. Set the address in o03
- b. Start scan function in the system unit.

\*) Can only be set when regulation is stopped ( $r12=0$ )

$$SW = 2.3x$$

\*\*) Can be controlled manually, but only when  $r12=-1$

\*\*\*) With access code 2 the access to these menus will be limited

Factory settings are indicated for standard units. Other code numbers have customized settings.

### The buttons

## *Set menu*

1. Push the upper button until a parameter r01 is shown
  2. Push the upper or the lower button and find that parameter you want to change
  3. Push the middle button until the parameter value is shown
  4. Push the upper or the lower button and select the new value
  5. Push the middle button again to enter the value.

*Cutout alarm relay / receipt alarm/see alarm code*

- Push short the upper button

### Set temperature

1. Push the middle button until the temperature value is shown
  2. Push the upper or the lower button and select the new value
  3. Push the middle button to select the setting

#### *Reading the temperature at defrost sensor*

- Push briefly the lower button

*Manuel start or stop of a defrost*

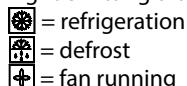

- Push the lower button for four seconds.  
(Though not for application 4).

*See HACCP registration*

1. Give the middle button a long push until h01 appears
  2. Select required h01-h10
  3. See value by giving the middle button a short push
